

The Frontiers in Human Health Summer School at

ST GEORGE'S, UNIVERSITY OF LONDON

12 JULY – 6 AUGUST 2021

If you're interested in gaining valuable insights into global health while spending a summer in London, St George's international four-week, credit-bearing Frontiers in Human Health Summer School will give you the opportunity to explore in-depth health topics and conduct your own research. Highlights of the course include:

- Insights into global health and public health challenges
- A look into immunology and infections such as Covid-19
- Visits to St George's facilities including research labs and dissection room
- An exciting social programme of activities in London
- Conduct a mini research project.

This year St George's is also offering scholarships to two outstanding summer school applicants. Each scholarship covers the full value of the course tuition fee at the home (UK) rate.

10% DISCOUNT OFF TUITION FEE FOR STUDENTS FROM PARTNER INSTITUTIONS

The programme is a University Level 6 module, i.e. final-year undergraduate module, worth 15 credits (3-4 US credits or 7.5 ECTS credits). It is an ideal taster for current undergraduate students who may be interested in pursuing postgraduate study in a field of scientific research.

The deadline for applications is **7 June 2021**.

To be considered for scholarship funding, please submit your application by **30 April 2021**.

“ Previous students have said:

“The teaching and lectures were of a very high quality. The lecturers were very passionate about their subject area. It was a unique and amazing experience to learn and study at St George’s.”

“The Frontiers in Human Health Summer School exceeded my expectations. The standard of teaching, the interactive discussion sessions and individual attention to each student made this experience worthwhile.”

“I enjoyed the lab work and the process of conducting the experiments, presenting and writing a report. I also enjoyed the variety of lectures. It broadened my perspective on how varied the field of human health and disease is.””
